TOP 5 WORST HALLOWEEN CANDY FOR YOUR TEETH

1. chewy candies
2. caramels
3. sour and citrus-flavored candies
4. hard candies
5. creamy chocolates

In general, sugar contributes to the breakdown of enamel and causes cavities. Chewy candies, including gummy candies and taffy, are among the worst offenders because they linger and stick around in your mouth, giving them additional time to cause tooth decay. Some chewy candies are sticky and strong enough to pull out a filling, bridge, or braces. Be sure to rinse with water and brush your teeth to prevent any lasting dental damage.

“Enjoy your candy, but use good judgement to maintain a healthy smile.”

– Dr. Richard Port

DID YOU KNOW?

Orthodontists are dental specialists concerned with the diagnosis, prevention, interception, guidance and correction of bad bites. The purpose of orthodontic treatment is to create a healthy bite—straight teeth that properly meet opposing teeth in the opposite jaw. A good bite makes it easier for you to bite, chew and speak.

If your teeth are crowded, protrusive, spaced too far apart, meet in an abnormal way, or do not meet at all, correction may be recommended. Braces and aligners are the “appliances” orthodontists most commonly use to guide your teeth into their proper positions. Retainers preserve and stabilize the results of your orthodontic treatment.

In the past, orthodontic treatment was associated with children and teens, but today many adults seek orthodontic treatment to correct long-standing problems, or problems that stem from maturational changes. Orthodontists can help people of any age achieve a healthy and beautiful smile.*

Dr. Port and Dr. Klein offer complimentary consultations. Call 847. 367. 6055 to schedule an appointment or contact us through our website at www.affiliateddentalspecialists.com.
